

Desert Words

My family lives in the desert. The environment here is hot and dry. Some desert animals hide in the shade or come out only at night. This behavior helps them stay cool.

People find ways to stay cool in the desert, too. The tenants who live in our apartment building got together and planted a garden. The garden creates shade and keeps our building cooler.

We decided to grow saguaro and other cactuses in the garden. The saguaro's thick skin holds in moisture. Saving water like this helps the cactus cope with the hot, dry place it lives in. Our garden almost never needs watering, so taking care of it is easy!
