

Dinosaur Words

Host: Dr. Topp, tell us what you have found near the river.

Dr. Topp: We have just found more dinosaur fossils. When these creatures died many, many years ago, their bodies were covered with soil and sand. Over time, the dinosaur bones, teeth, and other remains turned to stone and became part of the rock around them. We study these fossils to learn more about what dinosaurs were like.

Host: Were dinosaurs reptiles?

Dr. Topp: Yes, we think that many dinosaurs were cold-blooded animals, just like snakes and lizards.

Host: Did all dinosaurs hunt for prey?

Dr. Topp: No, only meat-eating dinosaurs hunted other animals for their meals. They usually ate fish, insects, and often other dinosaurs. Some hunted alone, while others hunted in packs with other dinosaurs.
